ABSTRACT

Purpose/Objective(s): The first clinical trial in humans with skin and oral cavity squamous cell carcinoma (SCC) was performed in order to evaluate the effect of a unique intratumoral alpha-radiation-based tumor ablation treatment termed Diffusing Alpha-emitters Radiation Therapy (DaRT).

Materials/Methods: Radium-224 loaded sources (DaRT seeds) were inserted into solid tumors and released by recoil short-lived alpha-emitting atoms (Rn-220, Po-216, Pb-212, Bi-212, Po-212, Tl-208). These atoms disperse in the tumor, and spray it with highly destructive alpha radiation. The decay products diffuse in the tumor mass to a distance of at least 5 mm.

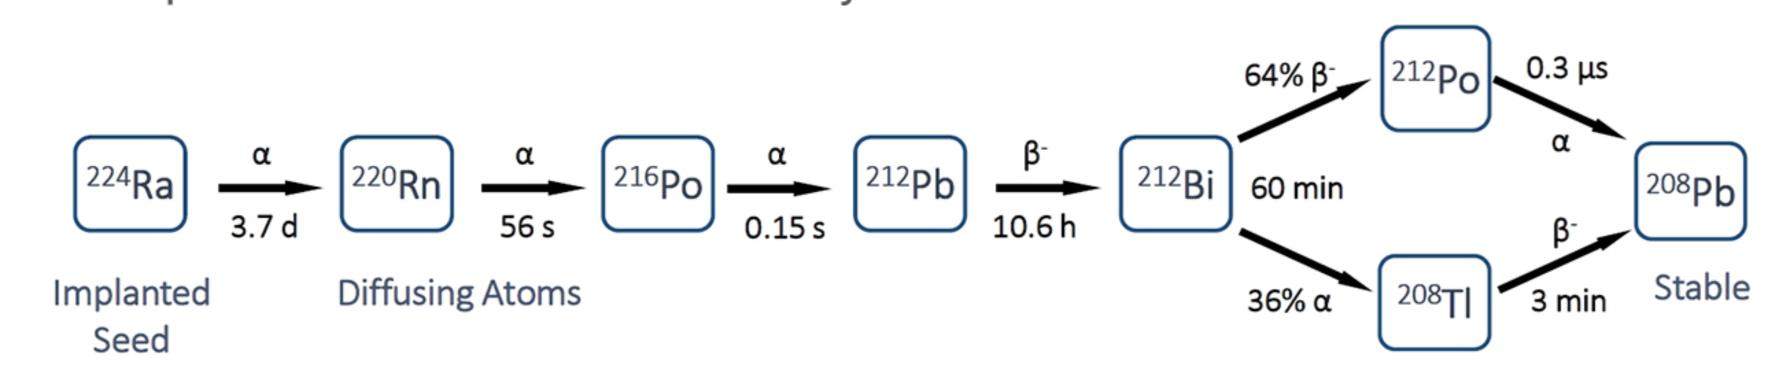

Results: A feasibility and safety clinical study is ongoing and currently 28 patients were treated at the Rabin Medical Center (Israel). Patients with histopathological confirmed skin or head and neck SCC, and tumor size ≤ 5 centimeters in the longest diameter, were enrolled. Treatment was delivered based on a CT-simulation pre-treatment plan. The seeds (1 cm long and 0.7 mm in diameter) each carrying a dose of 2 µCi were placed 5-6 millimeters from each other. CT was used to check the position of the radioactive seeds. Two weeks after implantation, the

the effect of treatment. Study results are available for 18 subjects who reached the 30-day visit. The age of the patients ranged between 60 to 102 (median 80). Ten patients had oral cavity SCC and 18 diagnosed with cutaneous SCC. Thirteen patients were treated within radiation failure fields (Radiation dosage >60 Gy). All tumors responded to the treatment; thirteen tumors had a complete response and five tumors showed a partial response. No major toxicity was noted.

Conclusion: In this feasibility and safety human study we demonstrated that alpha particles based DaRT exhibit enhanced radiobiological potential. The treatment was effective against radio-resistant SCC tumors without major toxicity.

INTRODUCTION

- The DaRT seed releases alpha-emitting atoms
- The recoiling atoms disperse in the tumor, forming a cluster of alpha emissions covering several millimeters
- The alpha radiation, known to cause double-strand irreparable breaks in DNA, dissolves the tumor and remains encapsulated within it
- Alpha-emitter: Radium-224 Decay Chain

CLINICAL STUDY RESULTS

KEY INCLUSION CRITERIA

- Histopathological confirmation of SCC
- Lesions ≤ 5 cm in the longest diameter (without nodal spread)
- Age ≥ 18
- WOCBP will have evidence of negative pregnancy test
- Life expectancy ≥ 6 months
- ECOG ≥ 2

KEY EXCLUSION CRITERIA

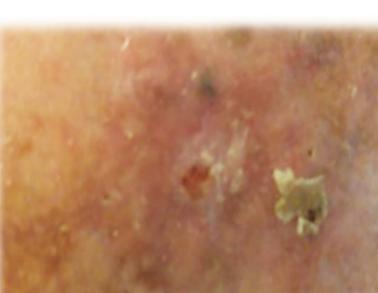

- Ulcerative lesion
- Tumor of Keratoacanthoma histology
- Patients with moribund diseases, autoimmune diseases or vasculitis.
- Patients under immunosuppressive and/or corticosteroid treatment.
- Participation in other studies in the past 30 days

PATIENT EXAMPLE

AT 22 - Procedure date: August 30st, 2018

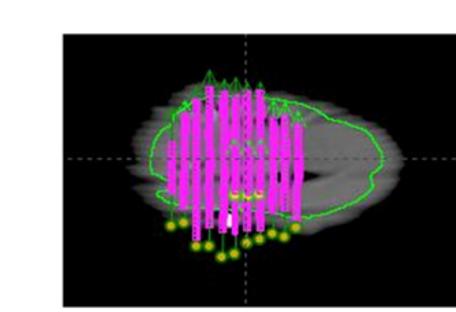

27/08/2018

Day 30

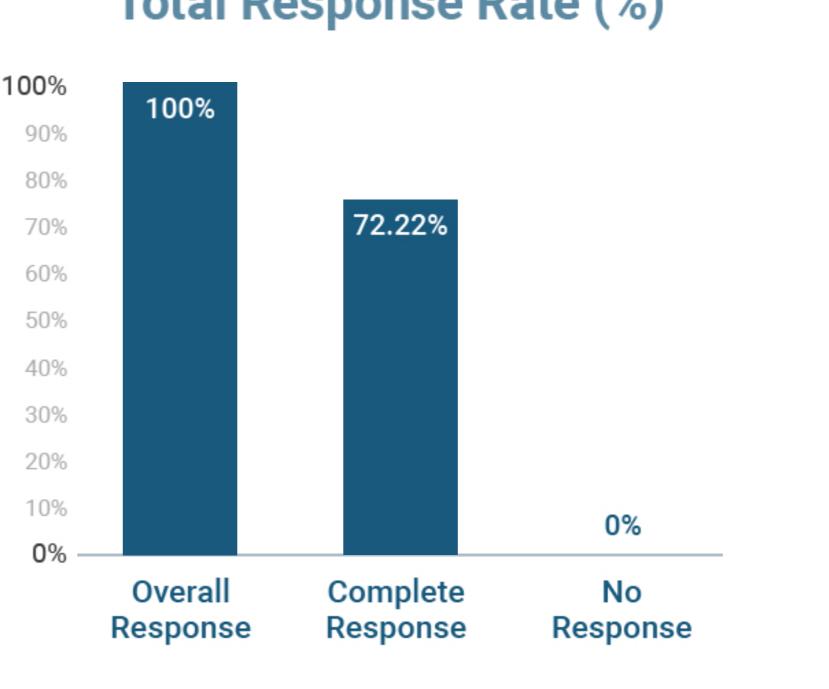

Initial tumor volume (cm³)	2.82
Alpha DaRT seeds inserted	24
Total activity kBq	2,100
Response	100%

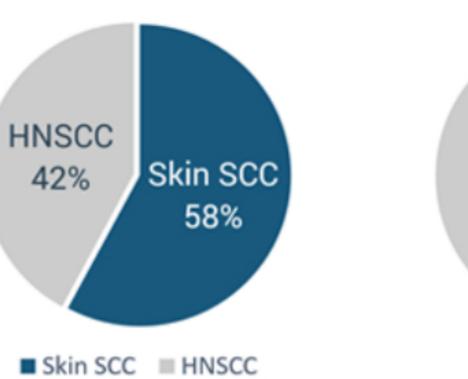

EFFICACY

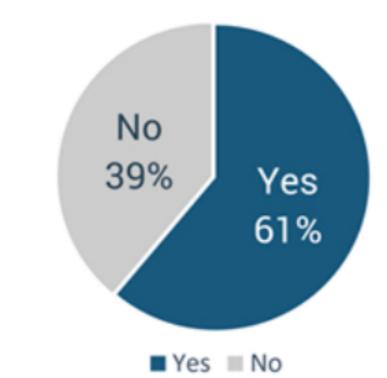

Patient	Tumor Location	Previous Treatment	Response
AT-01	Mandible	Yes	Partial
AT-02	Ear	Yes	Complete
AT-03	Tongue	Yes (x2)	Complete
AT-05	Parotid	Yes	Partial
AT-07	Tongue	Yes	Complete
AT-08	Nose	Yes	Complete
AT-11	Ear	Yes	Complete
AT-12	Tongue	Yes	Complete
AT-13	Cheek	No	Complete
AT-14	Lip	Yes	Complete
AT-15	Forehead	No	Partial
AT-16	Lip	No	Complete
AT-17	Parotid	Yes	Partial
AT-18	Scalp	No	Complete
AT-21 (L1)	Scalp	Yes	Complete

SAFETY

Radioactivity Levels: **Blood Measurements**

CONCLUSIONS

Treatment plan

- The ideal planning should include radiotherapist, surgeon and physicist
- The planning should be based on both direct visualization and imaging
- Better understanding of the required dose and radiation distribution will improve outcomes in large tumors
- Low toxicity, better overcover than under!

The Procedure

 The procedure is feasible, simple and can be done in relatively short time

The Alpha DaRT Treatment

- The treatment has very low toxicity and overall seems to be safe
- The treatment was proven to have the ability to destroy SCC tumors
- Complete response over 70%!
